DISCLAIMER

Please Read Carefully:

Realtek Semiconductor Corp., (Realtek) reserves the right to make corrections, enhancements, improvements and other changes to its products and services. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

Reproduction of significant portions in Realtek data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Realtek is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions.

Buyers and others who are developing systems that incorporate Realtek products (collectively, “Customers”) understand and agree that Customers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Customers have full and exclusive responsibility to assure the safety of Customers' applications and compliance of their applications (and of all Realtek products used in or for Customers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Customer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Customer agrees that prior to using or distributing any applications that include Realtek products, Customer will thoroughly test such applications and the functionality of such Realtek products as used in such applications.

Realtek's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation kits, (collectively, “Resources”) are intended to assist designers who are developing applications that incorporate Realtek products; by downloading, accessing or using Realtek's Resources in any way, Customer (individually or, if Customer is acting on behalf of a company, Customer's company) agrees to use any particular Realtek Resources solely for this purpose and subject to the terms of this Notice.

Realtek's provision of Realtek Resources does not expand or otherwise alter Realtek's applicable published warranties or warranty disclaimers for Realtek's products, and no additional obligations or liabilities arise from Realtek providing such Realtek Resources. Realtek reserves the right to make corrections, enhancements, improvements and other changes to its Realtek Resources. Realtek has not conducted any testing other than that specifically described in the published documentation for a particular Realtek Resource.

Customer is authorized to use, copy and modify any individual Realtek Resource only in connection with the development of applications that include the Realtek product(s) identified in such Realtek Resource. No other license, express or implied, by estoppel or otherwise to any other Realtek intellectual property right, and no license to any technology or intellectual property right of Realtek or any third party is granted herein, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which Realtek products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of Realtek Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from Realtek under the patents or other Realtek's intellectual property.

Realtek's Resources are provided “as is” and with all faults. Realtek disclaims all other warranties or representations, express or implied, regarding resources or use thereof, including but not limited to accuracy or completeness, title, any epidemic failure warranty and any implied warranties of merchantability, fitness for a particular purpose, and non-infringement of any third party intellectual property rights.

Realtek shall not be liable for and shall not defend or indemnify Customer against any claim, including but not limited to any infringement claim that related to or is based on any combination of products even if described in Realtek Resources or otherwise. In no event shall Realtek be liable for any actual, direct, special, collateral, indirect, punitive, incidental, consequential or exemplary damages in connection with or arising out of Realtek's Resources or use thereof, and regardless of whether Realtek has been advised of the possibility of such damages. Realtek is not responsible for any failure to meet such industry standard requirements.

Where Realtek specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Customers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any Realtek products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death. Such equipment includes, without limitation, all medical devices identified by the U.S.FDA as Class III devices and equivalent classifications outside the U.S.

Customers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Customers' own risk. Customers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Customer will fully indemnify Realtek and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.

TRADEMARKS

Realtek is a trademark of Realtek Semiconductor Corporation. Other names mentioned in this document are trademarks/registered trademarks of their respective owners.

USING THIS DOCUMENT

Though every effort has been made to ensure that this document is current and accurate, more information may have become available subsequent to the production of this guide.

1.1 Revision History

| Version | Release Date | Description of change |
|---------|--------------|---------------------------------------|
| 1.3.0 | 2022.10 | 1. First version for public release |
| 1.3.1 | 2022.12 | 1. Add OTA demo in detail |
| 1.3.2 | 2022.12 | 1. Add a section to describe hardware |

2 Overview

AmebaPro2 board is an easy-to-program platform for developing all kind of IoT applications. AmebaPro2 is equipped with various peripheral interfaces, including WiFi, BLE, GPIO INT, I2C, UART, SPI, PWM, and ADC. Through these interfaces, AmebaPro2 can connect with electronic components such as LED, switches, manometer, hygrometer, PM2.5 dust sensors ...etc. Besides, AmebaPro2 has three key features: Audio codec, Video codec and NN (build in NPU for AIoT).

MCU

Part Number: RTL8735B
32-bit Arm v8M, up to 500MHz

MEMORY

768KB ROM
512KB RAM
Supports MCM embedded DDR2/DDR3L memory up to 128MB
External Flash up to 64MB

KEY FEATURES

Integrated 802.11 a/b/g/n Wi-Fi, 2.4GHz/5GHz
Bluetooth Low Energy (BLE) 4.2
Integrated Intelligent Engine @ 0.4 TOPS
Ethernet Interface
USB Host/Device
SD Host
ISP
Audio Codec
H.264/H.265
Secure Boot
Crypto Engine

OTHER FEATURES

2 SPI interfaces
1 I2C interface
8 PWM interfaces
3 UART interfaces
3 ADC interfaces
2 GDMA interfaces
Max 23 GPIO

AmebaPro2 uses Micro USB to supply power, which is common in many smart devices.

4 Configure AWS IoT Core

4.1 Set up Your AWS Account and Permissions

Refer to the instructions at Set up your AWS Account <https://docs.aws.amazon.com/iot/latest/developerguide/setting-up.html>. Follow the steps outlined in these sections to create your account and a user and get started:

- Sign up for an AWS account
- Create a user and grant permissions
- Open the AWS IoT console

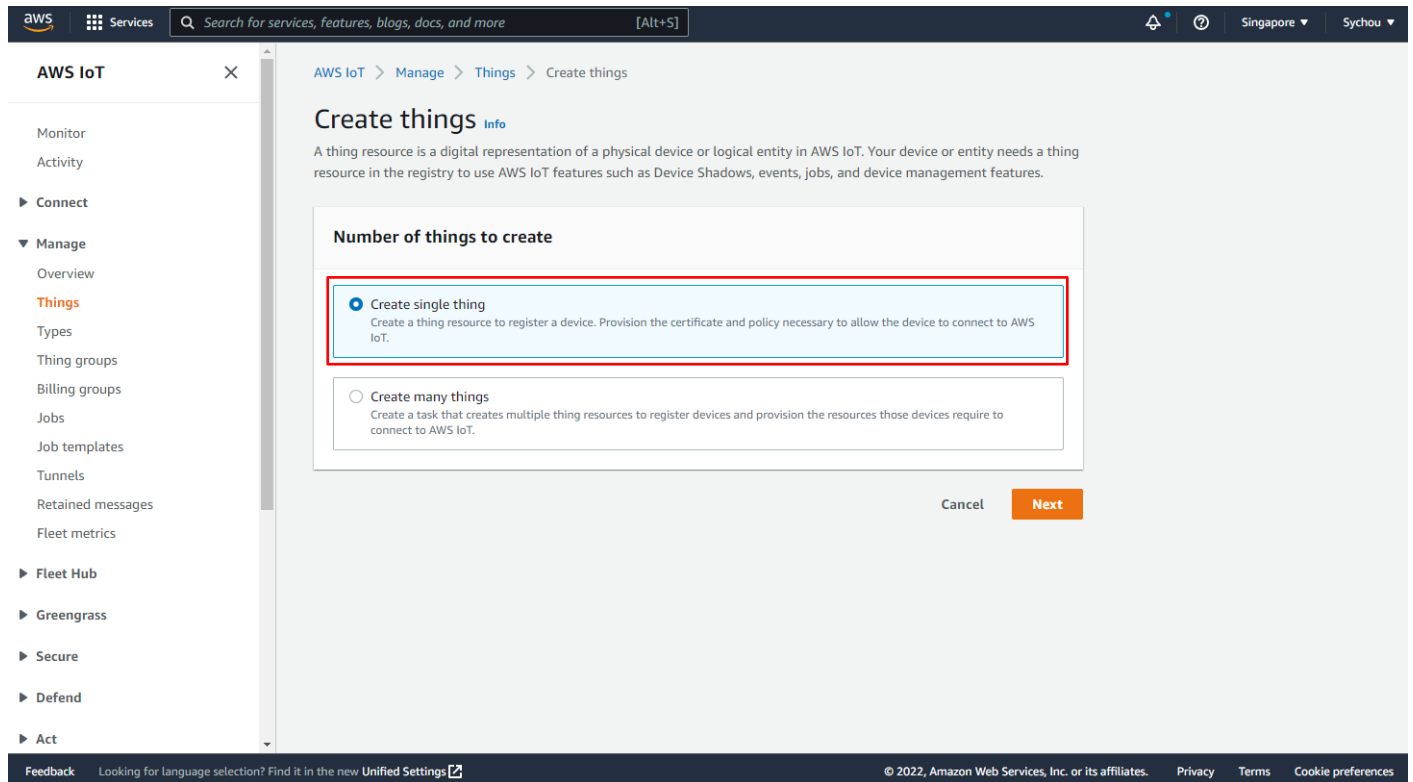

Please pay special attention to the Notes in AWS webpage.

4.2 Create a New Device

To create a new device, navigate to Manage -> Things in the left-hand navigation menu. Then click "Create things".

The screenshot shows the AWS IoT console interface. On the left, the navigation menu is visible with the 'Things' option under the 'Manage' section highlighted with a red box. The main content area displays the 'Things (13)' page, which includes a description of IoT things, a search bar, and a table of existing things. The 'Create things' button is also highlighted with a red box.

| | Name | Thing type |
|--------------------------|------|------------|
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |
| <input type="checkbox"/> | | - |

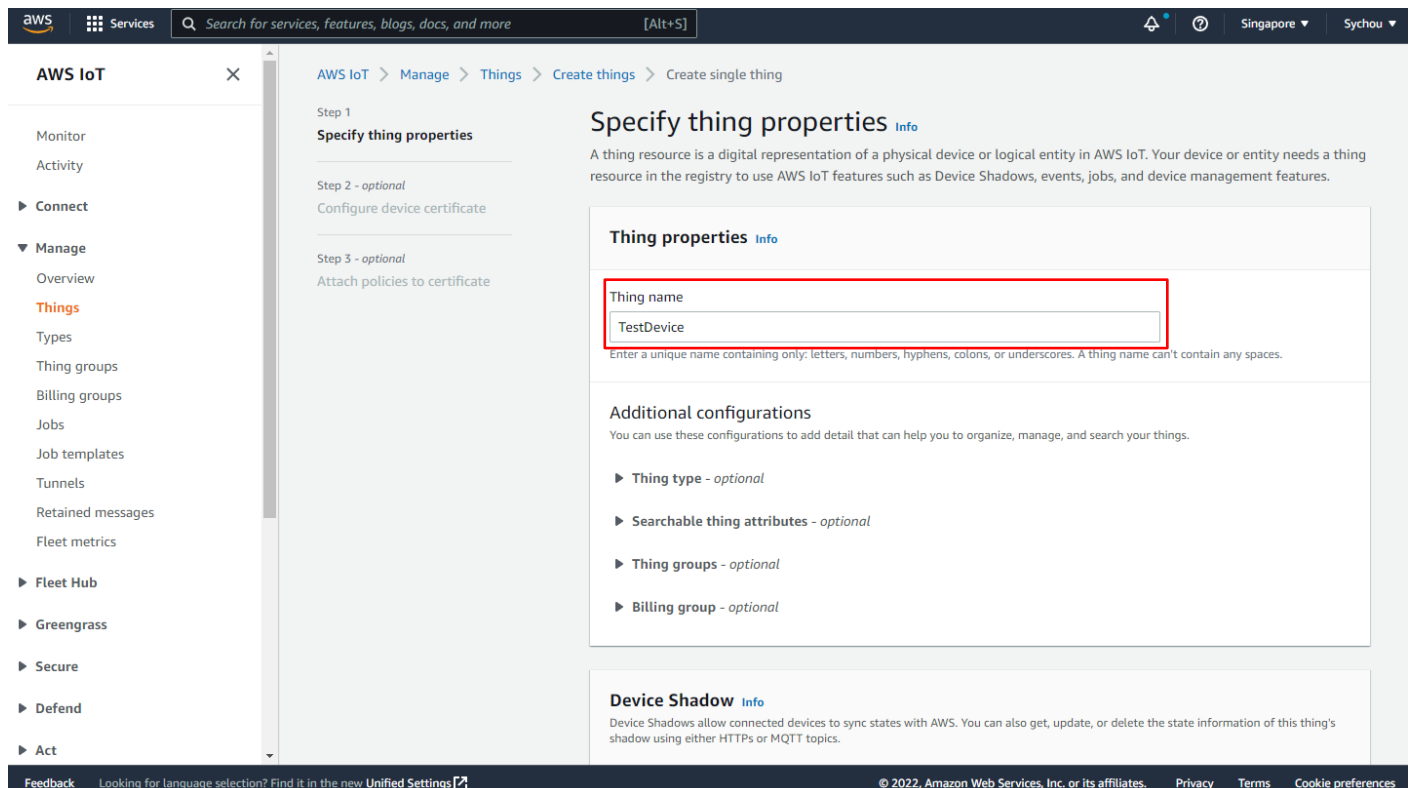

Number of things to create

☒ **Create single thing**
Create a thing resource to register a device. Provision the certificate and policy necessary to allow the device to connect to AWS IoT.

☐ **Create many things**
Create a task that creates multiple thing resources to register devices and provision the resources those devices require to connect to AWS IoT.

Cancel **Next**

Then, name the new device. This example uses the name TestDevice.

Specify thing properties

Step 1
Step 2 - optional
Step 3 - optional

Thing properties

Thing name
TestDevice

Enter a unique name containing only: letters, numbers, hyphens, colons, or underscores. A thing name can't contain any spaces.

Additional configurations
You can use these configurations to add detail that can help you to organize, manage, and search your things.

- ▶ Thing type - optional
- ▶ Searchable thing attributes - optional
- ▶ Thing groups - optional
- ▶ Billing group - optional

Device Shadow
Device Shadows allow connected devices to sync states with AWS. You can also get, update, or delete the state information of this thing's shadow using either HTTPs or MQTT topics.

Configure device certificate - optional [Info](#)

A device requires a certificate to connect to AWS IoT. You can choose how you to register a certificate for your device now, or you can create and register a certificate for your device later. Your device won't be able to connect to AWS IoT until it has an active certificate with an appropriate policy.

Device certificate

- ☒ **Auto-generate a new certificate (recommended)**
Generate a certificate, public key, and private key using AWS IoT's certificate authority.
- ☐ **Use my certificate**
Use a certificate signed by your own certificate authority.
- ☐ **Upload CSR**
Register your CA and use your own certificates on one or many devices.
- ☐ **Skip creating a certificate at this time**
You can create a certificate for this thing and attach a policy to the certificate at a later time.

Cancel Previous **Next**

Skip this part and “Create thing”, we will attach the policies to certificate later.

Attach policies to certificate - optional [Info](#)

AWS IoT policies grant or deny access to AWS IoT resources. Attaching policies to the device certificate applies this access to the device.

Policies (9) [Refresh](#) [Create policy](#)

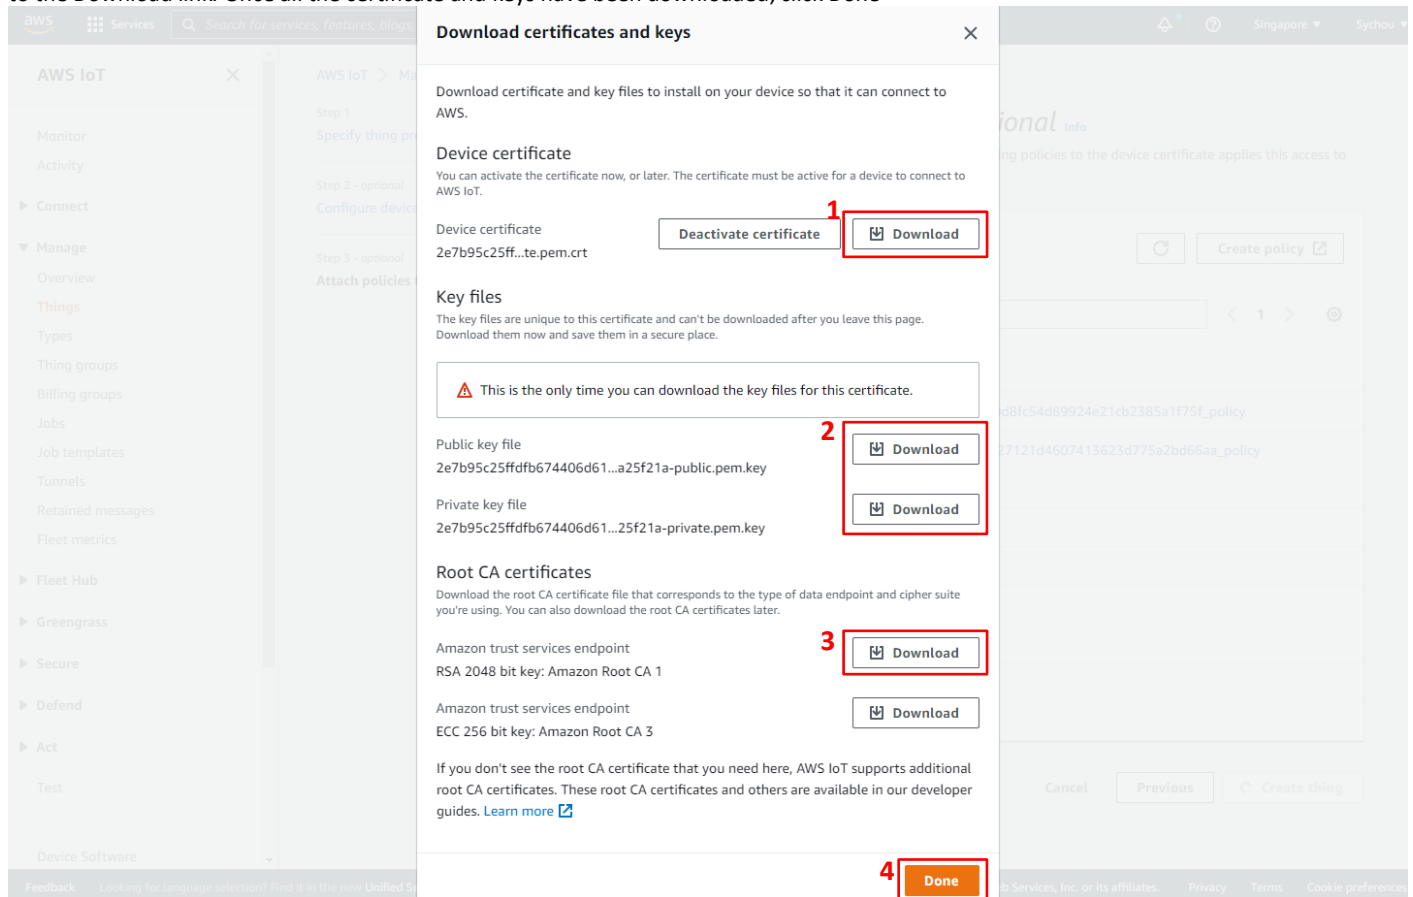

Select up to 10 policies to attach to this certificate.

< 1 > [Settings](#)

| <input type="checkbox"/> | Name |
|--------------------------|------|
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |
| <input type="checkbox"/> | |

Cancel Previous **Create thing**

Download the certificate, public key, and private key for the device by clicking Download. Next, download the root CA for AWS IoT by clicking to the Download link. Once all the certificate and keys have been downloaded, click Done

Download certificates and keys

Download certificate and key files to install on your device so that it can connect to AWS.

Device certificate
You can activate the certificate now, or later. The certificate must be active for a device to connect to AWS IoT.

Device certificate
2e7b95c25ff...te.pem.crt

Deactivate certificate **1** **Download**

Key files
The key files are unique to this certificate and can't be downloaded after you leave this page. Download them now and save them in a secure place.

2 **Download**

Public key file
2e7b95c25ffdfb674406d61...a25f21a-public.pem.key

Private key file
2e7b95c25ffdfb674406d61...25f21a-private.pem.key

3 **Download**

Root CA certificates
Download the root CA certificate file that corresponds to the type of data endpoint and cipher suite you're using. You can also download the root CA certificates later.

Amazon trust services endpoint
RSA 2048 bit key: Amazon Root CA 1

Amazon trust services endpoint
ECC 256 bit key: Amazon Root CA 3

4 **Done**

If you don't see the root CA certificate that you need here, AWS IoT supports additional root CA certificates. These root CA certificates and others are available in our developer guides. [Learn more](#)

4.3 Create a Policy

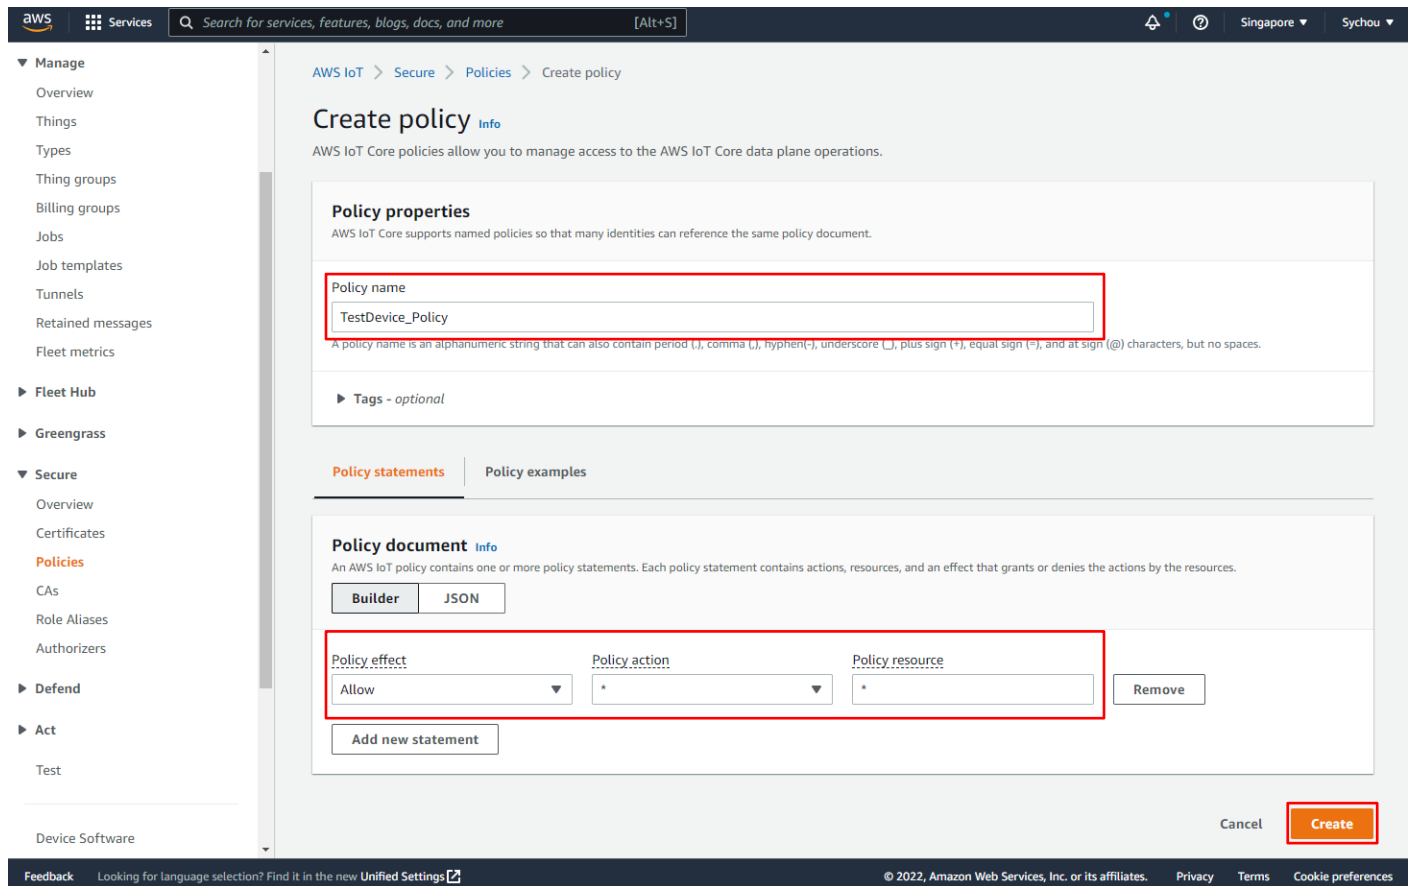

A policy defines a device's access permissions to IoT Core. To create a policy, navigate to Secure -> Policies. Then click "Create policy"

The screenshot shows the AWS IoT console interface. The top navigation bar includes the AWS logo, a search bar, and the user's location (Singapore). The left sidebar contains a navigation menu with categories like Manage, Fleet Hub, Greengrass, Secure, Defend, Act, and Device Software. Under the 'Secure' category, 'Policies' is highlighted with a red box. The main content area shows the 'AWS IoT policies (9)' page. It includes a description of AWS IoT policies, a search bar labeled 'Find policies', and a table with a header 'Policy name'. The 'Create policy' button is highlighted with a red box.

Note: this policy grants unrestricted access for all iot operations, and is to be used only in a development environment. For non-dev environments, all devices in your fleet must have credentials with privileges that authorize intended actions only, which include (but not limited to) AWS IoT MQTT actions such as publishing messages or subscribing to topics with specific scope and context. The specific permission policies can vary for your use cases. Identify the permission policies that best meet your business and security requirements.

For sample policies, refer to <https://docs.aws.amazon.com/iot/latest/developerguide/example-iot-policies.html>.

Also refer to <https://docs.aws.amazon.com/iot/latest/developerguide/security-best-practices.html>

The screenshot shows the AWS IoT console interface for creating a new policy. The left sidebar contains navigation links for 'Manage', 'Fleet Hub', 'Greengrass', 'Secure', 'Defend', and 'Act'. The main content area is titled 'Create policy' and includes a breadcrumb trail: 'AWS IoT > Secure > Policies > Create policy'. Below the title is a brief description: 'AWS IoT Core policies allow you to manage access to the AWS IoT Core data plane operations.'

The 'Policy properties' section contains a 'Policy name' field with the value 'TestDevice_Policy'. A red box highlights this field. Below it, a note states: 'A policy name is an alphanumeric string that can also contain period (.), comma (,), hyphen(-), underscore (_), plus sign (+), equal sign (=), and at sign (@) characters, but no spaces.'

The 'Policy document' section has two tabs: 'Policy statements' and 'Policy examples'. The 'Policy statements' tab is active. It shows a 'Policy effect' dropdown set to 'Allow', a 'Policy action' dropdown set to '*', and a 'Policy resource' dropdown set to '*'. A red box highlights these three dropdowns. To the right of these fields is a 'Remove' button. Below the dropdowns is an 'Add new statement' button.

At the bottom right of the form, there are 'Cancel' and 'Create' buttons. The 'Create' button is highlighted with a red box.

4.4 Attach Policy

The last step to configuring the device is attaching a policy. To attach a policy to new device, navigate to Manage -> Things. Then click on the device which was created.

Things (14) Info

An IoT thing is a representation and record of your physical device in the cloud. A physical device needs a thing record in order to work with AWS IoT.

Advanced search Run aggregations Edit Delete Create things

Filter things by: name, type, group, billing, or searchable attribute.

| <input type="checkbox"/> | Name | Thing type |

The screenshot shows the AWS IoT console interface. On the left is a navigation menu with sections: Manage, Fleet Hub, Greengrass, Secure, and Defend. The 'Secure' section is expanded, showing 'Certificates'. The main content area displays details for a specific certificate with ID '2e7b95c25ffdfb674406d61f5d5cad546be1dd06689e2b80dd89dfa4ca25f21a'. A red box highlights the 'Actions' dropdown menu, which is open, showing options like 'Activate', 'Deactivate', 'Revoke', 'Accept transfer', 'Reject transfer', 'Start transfer', 'Attach policy' (highlighted with a red box), 'Attach thing', 'Download', and 'Delete'. To the right of the menu, the certificate's status is 'Active', and its issuer is 'OU=Amazon Web Services O=Amazon.com Inc. L=Seattle ST=Washington C=US'.

This screenshot shows the 'Attach policies' dialog box in the AWS IoT console. The dialog has a search bar at the top. Below it, a list of policies is shown, with 'TestDevice_Policy' selected and highlighted by a red box. At the bottom of the dialog, there is a 'Choose AWS IoT policy' dropdown menu, a 'Cancel' button, and an 'Attach policies' button, which is also highlighted with a red box. The background shows the same certificate details as the previous screenshot, but they are slightly faded.

5 Configure FreeRTOS-LTS on AmebaPro2

5.1 Download FreeRTOS-LTS Library Source Code from Github

Open source link: <https://github.com/ambiot/amazon-freertos/tree/amebaPro2-9.x-202012-LTS>

branch: **amebaPro2-9.x-202012-LTS**

Go to "AmebaPro2_SDK/project/realtek_amebapro2_v0_example/src":

```
$ cd project/realtek_amebapro2_v0_example/src
```

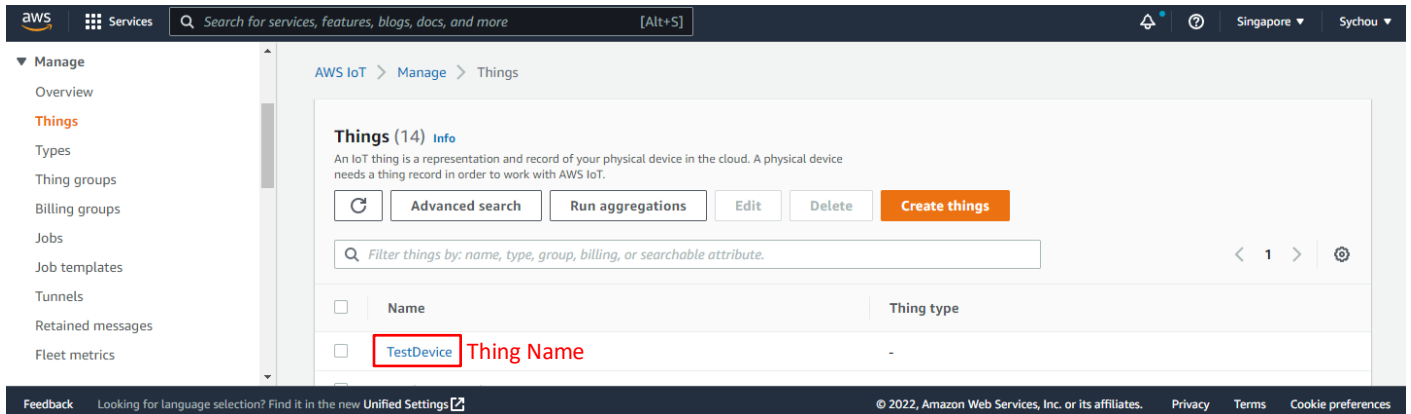

```
$ git clone --recurse-submodules -b amebaPro2-9.x-202012-LTS https://github.com/ambiot/amazon-freertos.git aws_iot_freertos_lts
```

5.2 Get Broker Endpoint by AWS IoT Core

The screenshot shows the AWS IoT Core console. On the left, the 'Settings' option under 'Device Software' is highlighted with a red box. The main content area shows the 'Settings' page for AWS IoT. The 'Device data endpoint' section displays the endpoint 'a2zweh2b7yb784-ats.iot.ap-southeast-1.amazonaws.com', which is highlighted with a red box and labeled 'Broker Endpoint' in red text. Below this, the 'Domain configurations' section shows a table with columns: Name, Domain name, Status, Service type, and Date updated. The table is empty, and a message states 'No domain configurations. You don't have any domain configurations.' with a 'Create domain configuration' button.

| Name | Domain name | Status | Service type | Date updated |
|---|-------------|--------|--------------|--------------|
| No domain configurations You don't have any domain configurations. | | | | |

5.3 Get Thing Name

The screenshot shows the AWS IoT console interface. On the left, there is a navigation menu with options like 'Manage', 'Overview', 'Things', 'Types', 'Thing groups', 'Billing groups', 'Jobs', 'Job templates', 'Tunnels', 'Retained messages', and 'Fleet metrics'. The main content area is titled 'Things (14) Info' and includes a description: 'An IoT thing is a representation and record of your physical device in the cloud. A physical device needs a thing record in order to work with AWS IoT.' Below this, there are buttons for 'Advanced search', 'Run aggregations', 'Edit', 'Delete', and 'Create things'. A search bar is present with the placeholder text 'Filter things by: name, type, group, billing, or searchable attribute.' Below the search bar, there is a table with columns 'Name' and 'Thing type'. The first row in the table shows 'TestDevice' under the 'Name' column, which is highlighted with a red box. The 'Thing type' column for this row is empty.

5.4 Setup IoT Core Information for Demo

Setup BROKER_ENDPOINT, THING_NAME, WIFI_SSID, PASSWORD in
 "project/realtek_amebapro2_v0_example/src/aws_iot_freertos_its/demos/include/aws_clientcredential.h"

```

/**
 * @brief Host name.
 * @todo Set this to the unique name of your IoT Thing.
 */
#define clientcredentialMQTT_BROKER_ENDPOINT      "xxxxxxxxxxxxx.amazonaws.com"

/**
 * @brief Port number the MQTT broker is using.
 */
#define clientcredentialMQTT_BROKER_PORT          8883

/**
 * @brief Port number the Green Grass Discovery use for JSON retrieval from cloud is using.
 */
#define clientcredentialGREENGRASS_DISCOVERY_PORT  8443

/**
 * @brief Wi-Fi network to join.
 * @todo If you are using Wi-Fi, set this to your network name.
 */
#define clientcredentialWIFI_SSID                  "TestAP"

/**
 * @brief Password needed to join Wi-Fi network.
 * @todo If you are using WPA, set this to your network password.
 */
#define clientcredentialWIFI_PASSWORD              "password"

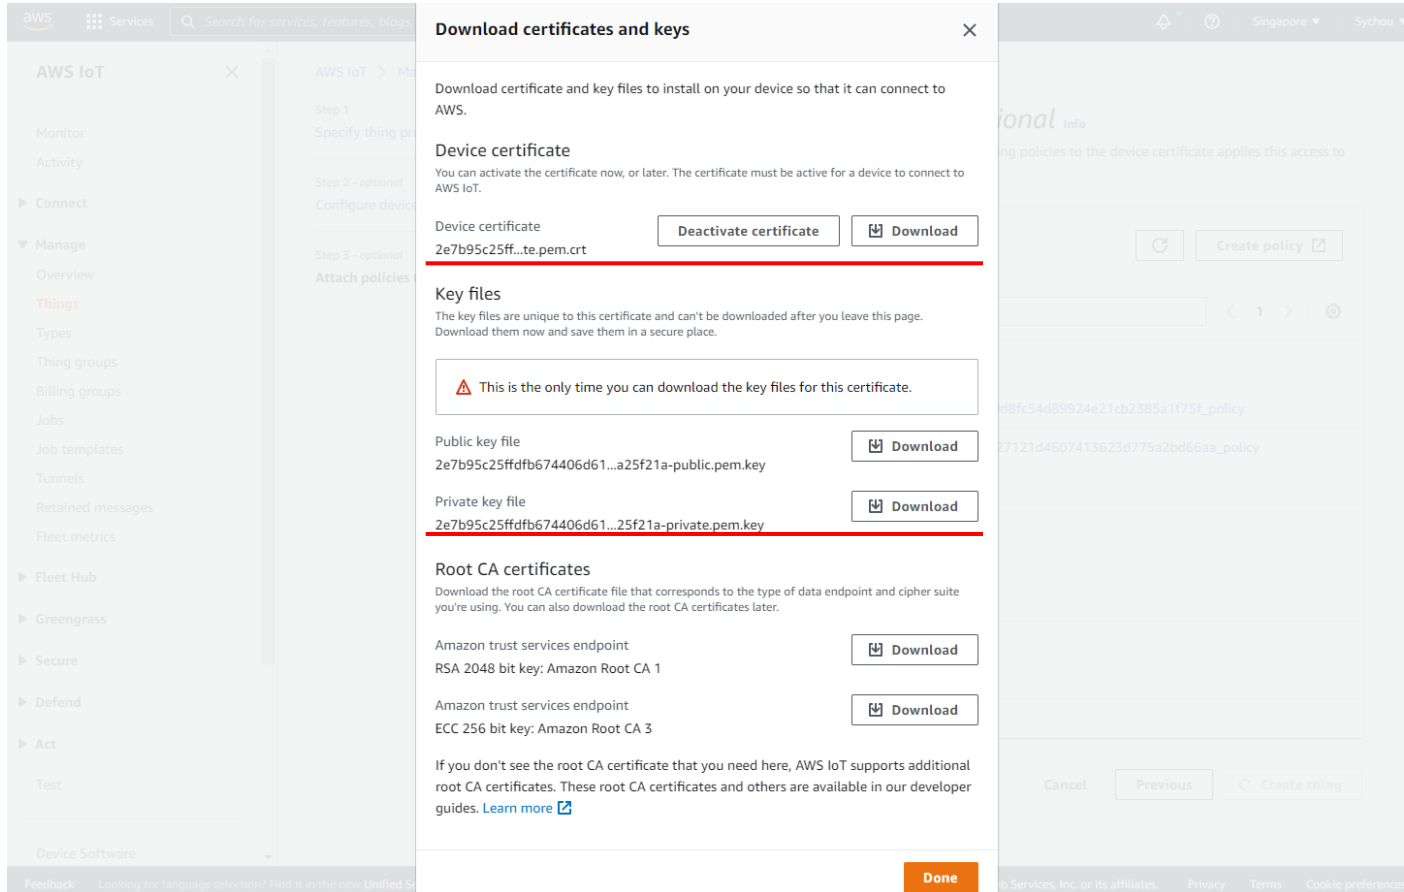

/**
 * @brief Wi-Fi network security type.
 * @see WiFiSecurity_t.
 * @note Possible values are eWiFiSecurityOpen, eWiFiSecurityWEP, eWiFiSecurityWPA,
 * eWiFiSecurityWPA2 (depending on the support of your device Wi-Fi radio).
 */
#define clientcredentialWIFI_SECURITY              eWiFiSecurityWPA2

#endif /* ifndef __AWS_CLIENTCREDENTIAL_H__ */

```

5.4.1 Setup Thing's Private Key and Certificate

Fill keyCLIENT_CERTIFICATE_PEM and keyCLIENT_PRIVATE_KEY_PEM in “project/realtek_amebaprot_v0_example/src/aws_iot_freertos_lts/demos/include/aws_clientcredential_keys.h” by xxxxxxxx-certifiacte.pem and xxxxxxxx-private.pem.key.

It can be done by the script [PEM-to-C-string.py](#) provided by AWS. It can be downloaded from https://github.com/aws/amazon-freertos/tree/main/tools/certificate_configuration.

```

$ python3 PEM-to-C-string.py --cert-file 31ba70aa1e99443b3734381ef71ec81a207e7d88964215e7d6e63eadd85b3ef-certificate.pem.crt
Formatted 31ba70aa1e99443b3734381ef71ec81a207e7d88964215e7d6e63eadd85b3ef-certificate.pem.crt

```

5.4.2 Enable FreeRTOS Demo on AmebaPro2

For example, if you would like to run MQTT mutual authentication demo, please find aws_demo_config.h in

"project/realtek_amebapro2_v0_example/src/aws_iot_freertos_lts/vendors/realtek/boards/amebaPro2/aws_demos/config_files/" and enable CONFIG_CORE_MQTT_MUTUAL_AUTH_DEMO_ENABLED

```

// #define CONFIG_CORE_HTTP_MUTUAL_AUTH_DEMO_ENABLED
#define CONFIG_CORE_MQTT_MUTUAL_AUTH_DEMO_ENABLED
// #define CONFIG_DEVICE_SHADOW_DEMO_ENABLED
// #define CONFIG_JOBS_DEMO_ENABLED

```

Now you can start to compile AmebaPro2 Amazon FreeRTOS project!

6 Set up your Development Environment

6.1 CMake install

Install cmake by using terminal. If the installation is successful, you can get the version by “cmake -version”.

```
$ sudo apt install cmake
```

6.2 Toolchains

Extract the toolchain file (the toolchain file may provide in tools folder):

```
$ cd <AmebaPro2_SDK>/tools
$ cat asdk-10.3.0-linux-newlib-build-3633-x86_64.tar.bz2.* | tar jxvf -
```

Note: If using windows, you can build the project by WSL(Windows Subsystem for Linux)

Add toolchain to PATH:

```
$ export PATH=$PATH:<AmebaPro2_SDK>/tools/asdk-10.3.0/linux/newlib/bin
```

Note: you can add it to ~/.bash_profile

6.3 Build Project

User can follow the following steps to build the project with aws demo:

Step 1. Open linux terminal and enter the project location: project/realtek_amebapro2_v0_example/GCC-RELEASE/.

Step 2. Create folder “build” and enter “build” folder.

Step 3. Run “cmake .. -G“Unix Makefiles” -DCMAKE_TOOLCHAIN_FILE=../toolchain.cmake -DEXAMPLE=amazon_freertos” to create makefile.

Step 4. Run “cmake --build . --target flash -j4” to build and generate flash binary.

In summary, user can run following commands with option “-DEXAMPLE=amazon_freertos” to build the image

```
$ cd project/realtek_amebapro2_v0_example/GCC-RELEASE
$ mkdir build
$ cd build
$ cmake .. -G"Unix Makefiles" -DCMAKE_TOOLCHAIN_FILE=../toolchain.cmake -DEXAMPLE=amazon_freertos
$ cmake --build . --target flash -j4
```

After successfully build, there should be an image file **flash_ntz.bin** located in “build/” directory.

Note: If there is some permission issues, you can do “chmod -R 777 <PATH_TO_YOUR_SDK>”

6.4 Establishing a Serial Connection

For the log UART setting:

1. Connect AmebaPro2 to the computer via Micro USB as shown in Fig 6-1
2. After connecting to PC, create a console session by console tools (like tera term, MoBaxterm) with baud rate 115200
3. Press the reset button, then you can see the log from EVB

Fig 6-1 Demo board – log UART

The default image boot up console log shown as Fig 6-2:

```

== Rt18735b IoT Platform ==
Chip VID: 0, Ver: 0
ROM Version: v3.0

[Normal mode]
BootFromNORFlash
[SPIF Err]Invalid ID
[Start Boot ROM...]
=== Load PARTBL ===
=== Load Done ===
=== Load ISP_IQ ===
[fcs chk pass]
ISP_IQ @ 0x8401080, 0x19f80, 0x0
mfcs_data version 0x00010001
fcs_data version 0x00010101
=== Process ISP_IQ ===
=== Load Done ===
=== Load BL ===
[Image Start Table @ 0x18200]
=== Load Done ===

```

Fig 6-2 boot up console log

6.5 Image Download

6.5.1 Enter Download Mode

Press these two buttons in following figure simultaneously to enter download mode.

Fig 6-3 Enter download mode

6.5.2 Download Image to Flash

Copy the image **flash_ntz.bin** to image tool folder **tools/Pro2_PG_tool_linux_v1.3.x**.
Then, Use Pro2_PG_tool_linux_v1.3.x command line tool to download image.

Nor flash

```
$ ./uartfwburn.linux -p /dev/ttyUSB? -f flash_ntz.bin -b 2000000 -U
```

Nand flash

```
$ ./uartfwburn.linux -p /dev/ttyUSB? -f flash_ntz.bin -b 2000000 -n pro2
```

After firmware image downloaded, press the reset button to reboot the device and open terminal console to check the log.

Note: If using windows, replace *uartfwburn.linux* with *uartfwburn.exe* and replace */dev/ttyUSB?* with *COM?*

7 MQTT Demo

7.1 Run MQTT Demo

Default setting of SDK are enable MQTT demo. Please refer 5.4.2 to enable the MQTT demo and refer chapter 6 to build and download the demo image.

Once the AmebaPro2 EVB has rebooted, the application will automatically start run MQTT demo and communicate to IoT Core.

```

7.2 Monitoring MQTT Messages on the Cloud

To subscribe to the MQTT topic with the AWS IoT MQTT client

1. Sign in to the [AWS IoT console](#).
2. In the navigation pane, choose Test to open the MQTT client.
3. In Subscription topic, enter “+/example/topic”, and then choose Subscribe to topic.

AWS IoT > MQTT test client

MQTT test client [Info](#)

You can use the MQTT test client to monitor the MQTT messages being passed in your AWS account. Devices publish MQTT messages that are identified by topics to communicate their state to AWS IoT. AWS IoT also publishes MQTT messages to inform devices and apps of changes and events. You can subscribe to MQTT message topics and publish MQTT messages to topics by using the MQTT test client.

Subscribe to a topic

8 OTA Demo

8.1 OTA Update Prerequisites

Please refer to the AWS official guide (<https://docs.aws.amazon.com/freertos/latest/userguide/ota-prereqs.html>) and finish the following steps:

- Step 1. Prerequisites for OTA updates using MQTT
- Step 2. Create an Amazon S3 bucket to store your update
- Step 3. Create an OTA Update service role
- Step 4. Create an OTA user policy
- Step 5. Create `esdsigner.key` and `ecdsasigner.crt` by openssl
you can create the key and certification by running:
`$ sudo openssl ecparam -name prime256v1 -genkey -out ecdsa-sha256-signer.key.pem`
`$ sudo openssl req -new -x509 -days 3650 -key ecdsa-sha256-signer.key.pem -out ecdsa-sha256-signer.crt.pem`
- Step 6. Add certificate pem(`ecdsa-sha256-signer.crt.pem`) into `project\realtek_amebapro2_v0_example\src\aws_iot_freertos_lts\vendors\realtek\boards\amebaPro2\aws_demos\config_files\ota_demo_config.h`

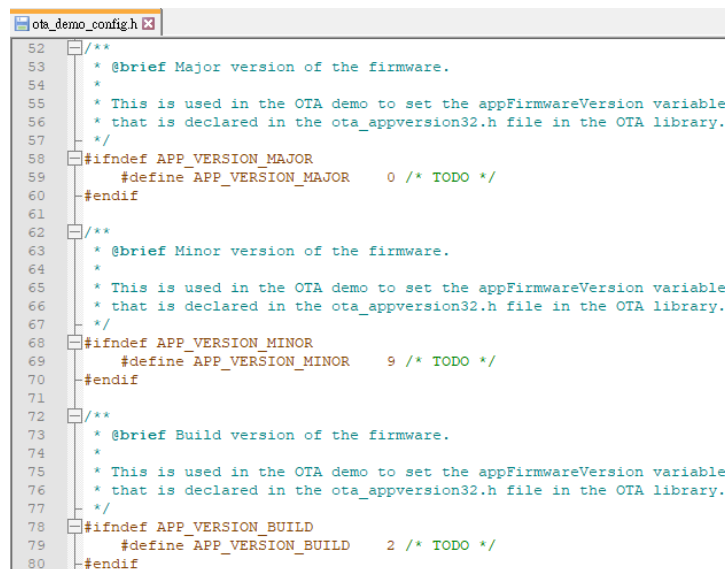

```

35  /**
36   * @brief Certificate used for validating code signing signatures in the OTA PAL.
37   */
38  #ifndef otapalconfigCODE_SIGNING_CERTIFICATE
39  #define otapalconfigCODE_SIGNING_CERTIFICATE \
40  "-----BEGIN CERTIFICATE-----\n" \
41  "\n" \
42  "\n" \
43  "\n" \
44  "\n" \
45  "\n" \
46  "\n" \
47  "\n" \
48  "-----END CERTIFICATE-----\n" \
49  #endif

```

8.2 Set the App Version to Image File

The app number in “ota_demo_config.h” decide the version of application code:

```

52  /**
53   * @brief Major version of the firmware.
54   *
55   * This is used in the OTA demo to set the appFirmwareVersion variable
56   * that is declared in the ota_appversion32.h file in the OTA library.
57   */
58  #ifndef APP_VERSION_MAJOR
59  #define APP_VERSION_MAJOR 0 /* TODO */
60  #endif
61
62  /**
63   * @brief Minor version of the firmware.
64   *
65   * This is used in the OTA demo to set the appFirmwareVersion variable
66   * that is declared in the ota_appversion32.h file in the OTA library.
67   */
68  #ifndef APP_VERSION_MINOR
69  #define APP_VERSION_MINOR 9 /* TODO */
70  #endif
71
72  /**
73   * @brief Build version of the firmware.
74   *
75   * This is used in the OTA demo to set the appFirmwareVersion variable
76   * that is declared in the ota_appversion32.h file in the OTA library.
77   */
78  #ifndef APP_VERSION_BUILD
79  #define APP_VERSION_BUILD 2 /* TODO */
80  #endif

```

Please note that the newer image file must have the bigger version number. So now, you need two image file to perform this demo.

- One image with older version should be downloaded to your AmebaPro2, and wait the OTA job coming.
- Another image with newer version (APP_VERSION_MAJOR or APP_VERSION_MINOR should be incremented and the image built) will be uploaded to S3 bucket. Then, create a new job for OTA.

Your newer image for OTA - **ota.bin** will also be located in “build/” directory after compilation.

Note: newer version image file should be signed by a private key before uploading. Next section will introduce how to sign the image.

8.3 Custom-Signed Image and Signature

We use custom signing feature provided by amazon to manually sign the OTA binary to get the signatures used to verify the integrity of the firmware after download. The ota.bin is manually signed using the ECDSA P-256 key provided by user.

The custom signing process is executed by a python script – **python_custom_ecdsa_Pro2.py**, that provided in the folder “project\realtek_amebapro2_v0_example\src\aws_iot_freertos_lts\tools\amazon_ota_tools\python_custom_ecdsa_Pro2.py”

The python script requires the following pre-requisites to work

1. Python must be installed in the windows system with version 3.7.x or later
2. Pyopenssl library must be installed using 'pip install pyopenssl'
3. The ECDSA signing key and the Certificate pair must be present in the same folder as the python script and must be named 'ecdsa-sha256-signer.key.pem' and 'ecdsa-sha256-signer.crt.pem' respectively.

(**Note:** The key pair in SDK are just for example, please generated new key by openssl !)

Run the python script in folder: “project\realtek_amebapro2_v0_example\src\aws_iot_freertos_lts\tools\amazon_ota_tools\”

- command after GCC build : **\$ python3 python_custom_ecdsa_Pro2.py**

There might be some error if there are packages lack in your environment (like openssl...). Please install the package and run the script again.

Once all these are present and the python script is run, it will generate a signature file – **IDT-OTA-Signature** in “project\realtek_amebapro2_v0_example\src\aws_iot_freertos_lts\tools\amazon_ota_tools”. This will be used in next step – create OTA job in AWS-IOT Core.

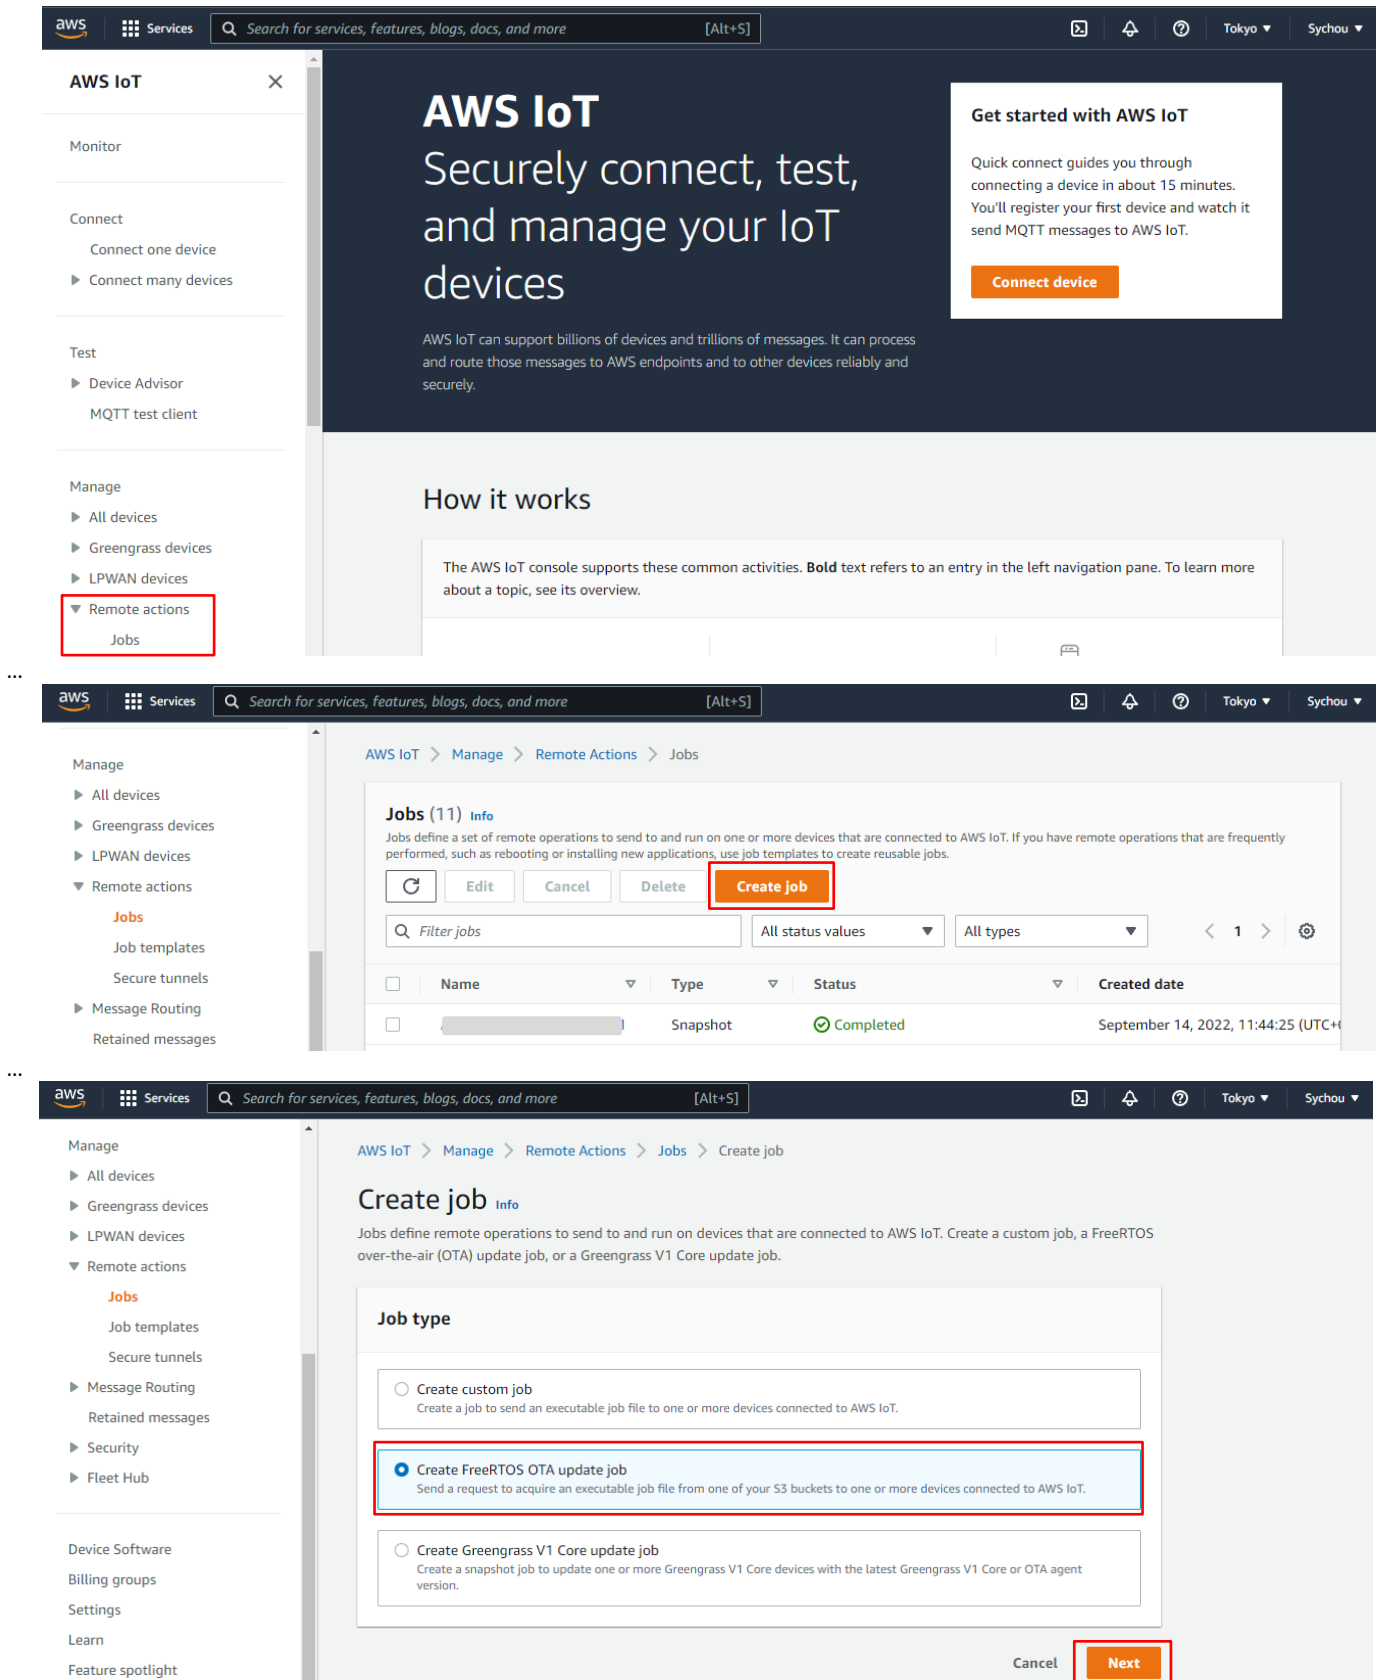

After getting the custom signed signature, you can upload **ota.bin** to your S3 bucket.

8.4 How to Trigger a Custom Signed OTA Job in Amazon AWS IOT Core

Go to AWS IoT Core <https://console.aws.amazon.com/iot/home>. Then, follow the following steps to create an AWS OTA task for AmebaPro2:

Step 1. Click on 'Create OTA update job', select your job type and then click next.

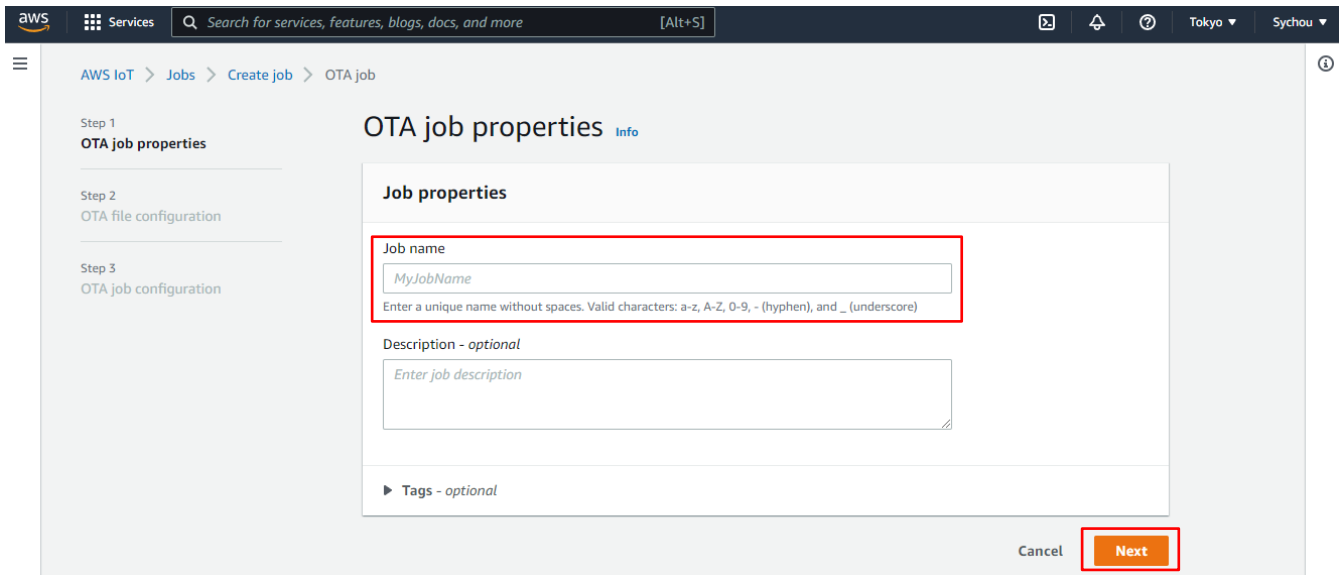

The first screenshot shows the AWS IoT console home page. The left navigation pane has 'Remote actions' highlighted with a red box, and 'Jobs' is listed below it. The main content area has a 'Get started with AWS IoT' section with a 'Connect device' button.

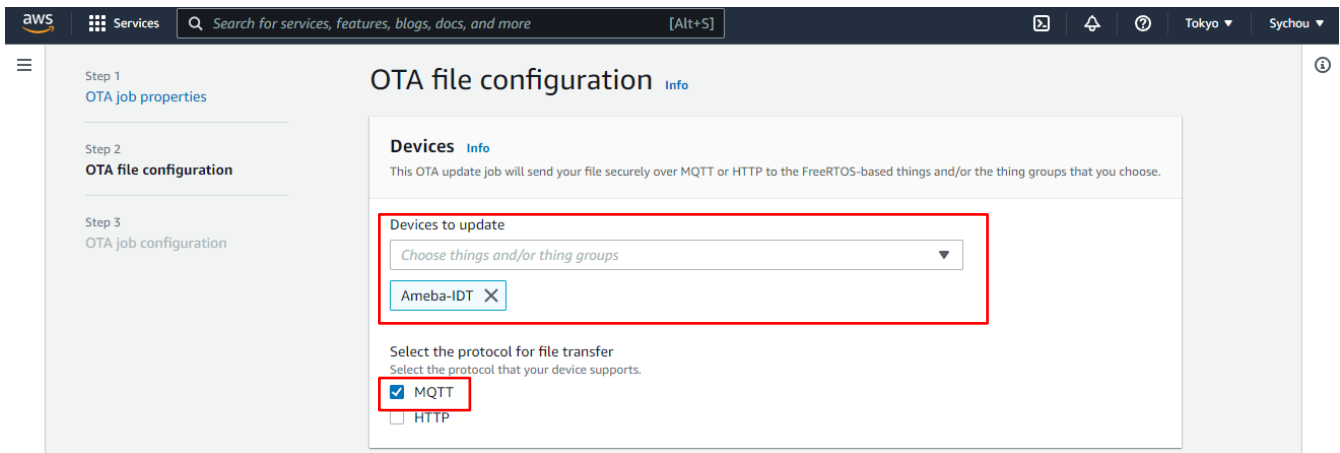

The second screenshot shows the 'Jobs (11) Info' page. The 'Create job' button is highlighted with a red box. Below it is a table of jobs with columns: Name, Type, Status, and Created date. One job is listed with Type 'Snapshot' and Status 'Completed'.

The third screenshot shows the 'Create job' page. The 'Create FreeRTOS OTA update job' option is highlighted with a red box. The 'Next' button at the bottom right is also highlighted with a red box.

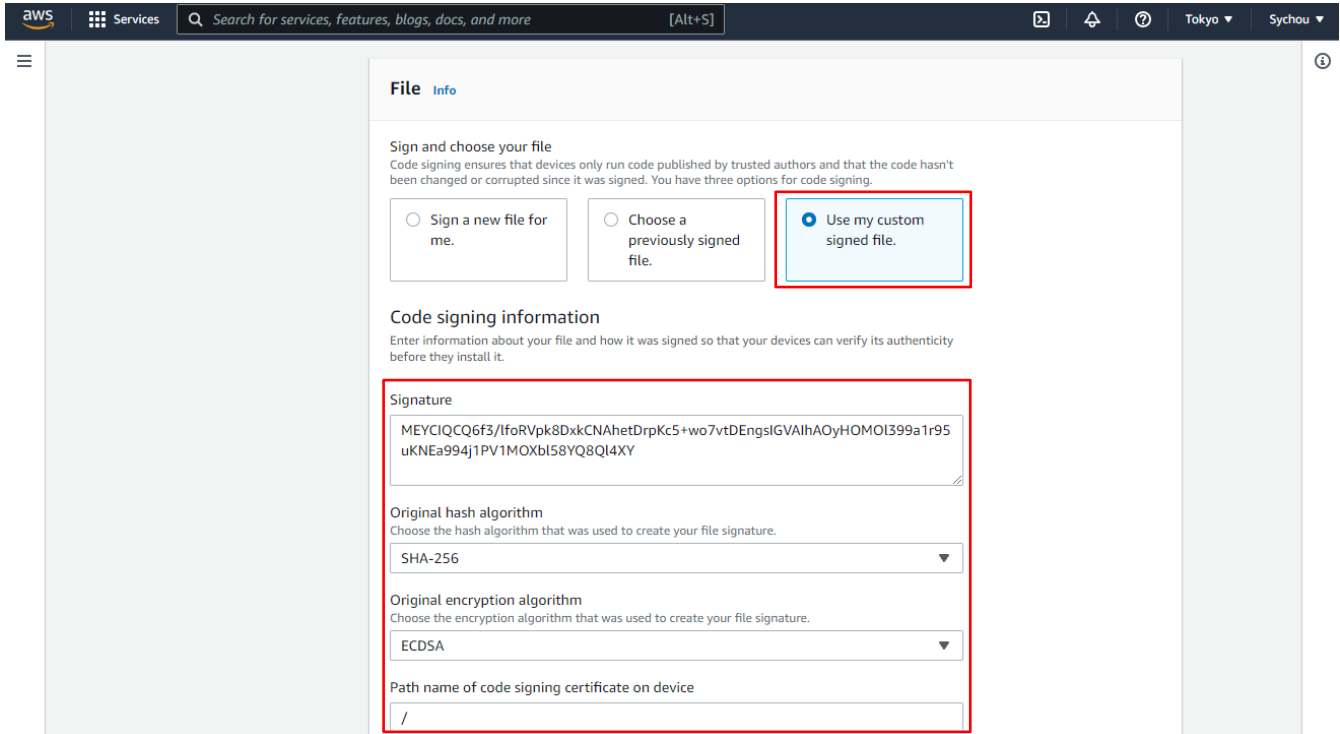

Step 2. For Job properties, give a unique name to your OTA job, then click next.

Step 3. In the following page, choose your device to update and select the protocol for file transfer

- Step 4. In the following page, choose the option 'Use my custom signed firmware image'.
 In the signature field, copy and paste the content of **IDT-OTA-Signature** (generated in previous section).
 Choose hash algorithm as 'SHA-256'.
 Choose encryption algorithm as 'ECDSA'.
 In "pathname of code signing certificate", enter '/'

File Info

Sign and choose your file
 Code signing ensures that devices only run code published by trusted authors and that the code hasn't been changed or corrupted since it was signed. You have three options for code signing.

☐ Sign a new file for me. ☐ Choose a previously signed file. ☒ Use my custom signed file.

Code signing information
 Enter information about your file and how it was signed so that your devices can verify its authenticity before they install it.

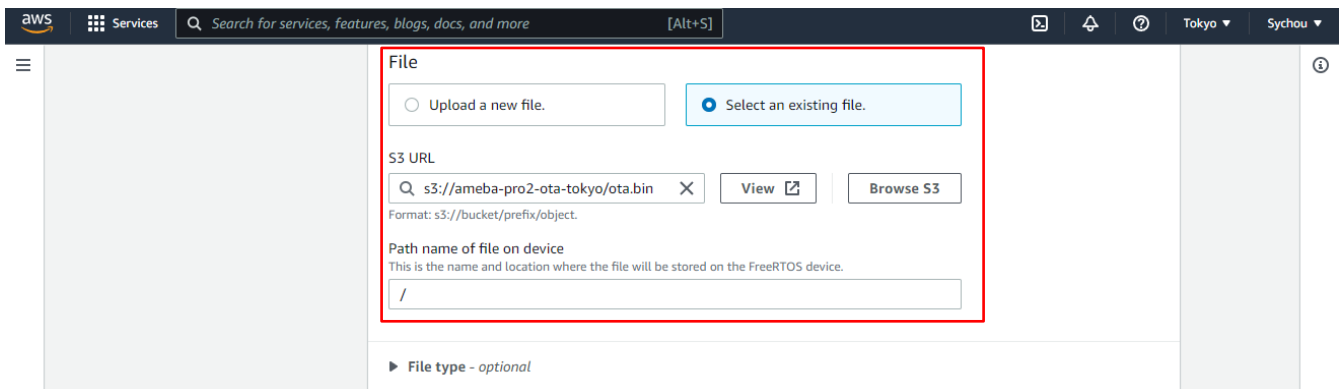

Signature
 MEYCIQCQ6f3/foRVpk8DxkCNAhetDrpKc5+wo7vtDEngslGVAIhAOyHOMOI399a1r95uKNEa994j1PV1MOXbI58YQ8QI4XY

Original hash algorithm
 Choose the hash algorithm that was used to create your file signature.
 SHA-256

Original encryption algorithm
 Choose the encryption algorithm that was used to create your file signature.
 ECDSA

Path name of code signing certificate on device
 /

- Step 5. Choose your custom signed firmware binary that was generated by the python script from S3 bucket.
 In "Pathname of file on device", enter '/'

File

☐ Upload a new file. ☒ Select an existing file.

S3 URL
 s3://ameba-pro2-ota-tokyo/ota.bin View Browse S3
 Format: s3://bucket/prefix/object.

Path name of file on device
 This is the name and location where the file will be stored on the FreeRTOS device.
 /

File type - optional

Step 7. Choose the IAM role for OTA update job. User can create a role according to the instructions in [Create an OTA Update service role](#).

Step 8. Click next, and create your OTA job.

| | Name | Type | Status | Created date |
|--------------------------|-------------------------|----------|---------------------------------|---|
| <input type="checkbox"/> | AFR_OTA-OTA_Pro2_0914_2 | Snapshot | In progress - Rollout completed | September 14, 2022, 13:43:38 (UTC+0800) |

8.5 Run OTA Demo

Now we can see that the status of OTA job on AWS IoT Core is “in progress”. It means that it is waiting AmebaPro2 to request the update.

Next, download the image file with older version number 0.9.2 to AmebaPro2 and then reboot the device, the application will automatically start run OTA demo.

In the beginning, we can check the app version of this running firmware, and the OTA process by the job ID:

```

3 6150 [iot_thread] [INFO] [DEMO][6150] Successfully initialized the demo. Network type for the demo: 1

```

In the final, the log imply that OTA success!

9 Troubleshooting

If these steps don't work, look at the device log in the serial terminal. You should see some text that indicates the source of the problem.

For general troubleshooting information about Getting Started with FreeRTOS, see [Troubleshooting getting started](#).

9.1 ERROR: Invalid Key

Please check **WIFI_SSID** and **WIFI_PASSWORD** in "project/realtek_amebapro2_v0_example/src/aws_iot_freertos_lts/demos/include/aws_clientcredential.h"

```
Enter SSID for Soft AP started
